

CONCEPT NOTE

Project Title

Career Compass AI – An AI-Based Career Guidance Assistant

Submitted By:

Chanchal Gore

1. Introduction:

Career guidance plays a vital role in helping students make informed decisions about their education and future careers. However, many students face difficulties in selecting the right career path due to scattered information, limited access to career counseling, and a lack of personalized guidance.

Career Compass AI is a web-based career guidance assistant designed to simplify this process. The application provides students with career guidance, resume-building tips, interview preparation resources, internship guidance, and skill development recommendations through an easy-to-use chatbot interface.

The project supports **United Nations Sustainable Development Goal (SDG) 4: Quality Education** by improving access to career-related information and promoting informed educational and professional decision-making.

2. Background:

Students often rely on multiple websites, social media platforms, and online forums to search for career information. This process is time-consuming and often results in confusion due to inconsistent or incomplete information.

Many students, especially those in rural and semi-urban areas, do not have access to professional career counselors. As a result, they struggle to identify suitable career paths, prepare professional resumes, develop interview skills, and find internship opportunities.

Career Compass AI addresses these challenges by providing a centralized platform where users can obtain career-related guidance quickly and efficiently.

3. Problem Statement:

Students encounter several challenges during career planning, including:

- Lack of centralized career guidance.
- Limited access to professional counseling.
- Difficulty preparing resumes.
- Insufficient interview preparation.
- Lack of awareness about internship opportunities.
- Confusion regarding required technical skills and higher education options.

These challenges often delay career planning and reduce students' confidence in making informed decisions.

4. Proposed Solution:

Career Compass AI is a lightweight web application developed using HTML, CSS, and JavaScript.

The application functions as a career guidance chatbot that responds to predefined career-related queries. Users can ask questions related to careers, resumes, interviews, internships, skills, and higher studies. The chatbot processes the user's query using keyword matching and displays relevant responses instantly.

The application is designed to be simple, responsive, and accessible on desktop and mobile devices.

5. Objectives:

The primary objectives of the project are:

- Provide career guidance through an interactive chatbot.
- Help students prepare professional resumes.
- Assist users in interview preparation.
- Guide students towards internship opportunities.
- Recommend technical and professional skills.

- Promote awareness of higher education opportunities.
 - Support SDG 4 – Quality Education.
-

6. Target Users:

Primary Users

- School Students (Class 10–12)
- College Students
- Engineering Students
- Fresh Graduates

Secondary Users

- Career Counselors
 - Educational Institutions
 - Training Centers
-

7. Key Features:

- Career Guidance
 - Resume Building Tips
 - Interview Preparation
 - Internship Guidance
 - Skill Development Roadmap
 - Higher Studies Guidance
 - User-Friendly Interface
 - Responsive Web Design
-

8. Technology Stack:

- HTML5
- CSS3
- JavaScript

- GitHub
 - GitHub Pages
-

9. Expected Outcomes:

The project aims to:

- Improve students' career awareness.
 - Reduce the time spent searching for career information.
 - Increase awareness of internships and skill development.
 - Encourage better career planning.
 - Support digital learning initiatives.
-

10. SDG Alignment:

Selected SDG: SDG 4 – Quality Education

Career Compass AI contributes to SDG 4 by making career guidance more accessible, helping students develop essential employability skills, and promoting informed educational and career choices.

11. Future Scope:

Future enhancements may include:

- AI-powered responses using Google Gemini or OpenAI.
 - Voice-based interaction.
 - Resume analysis and scoring.
 - Personalized career recommendations.
 - Job and internship recommendation system.
 - Multi-language support.
 - User login and progress tracking.
-

12. Conclusion:

Career Compass AI is a simple yet impactful career guidance platform that demonstrates how web technologies can be used to address educational challenges. By providing students with accessible career information, resume guidance, interview preparation, and skill development support, the project contributes to SDG 4 and promotes better career readiness through digital innovation.
