1. Executive Summary

Career Compass AI is a web-based career guidance assistant developed as part of the Lenovo LEAP AI Internship. The application helps students explore career opportunities, prepare resumes, practice interview questions, improve technical skills, and learn about higher education options.

The project demonstrates the use of front-end web technologies to create an interactive chatbot that provides quick responses to common career-related questions.

2. Introduction

Students often struggle to find reliable career guidance due to scattered information available across multiple websites. Career Compass AI simplifies this process by providing a single platform where users can ask questions related to careers, interviews, internships, skills, and education.

The application is lightweight, responsive, and easy to use.

3. Sustainable Development Goal (SDG)

Selected SDG

SDG 4 – Quality Education

Why SDG 4?

Quality education extends beyond classroom learning. Students require career awareness, skill development, and professional guidance to make informed decisions.

Career Compass AI supports this goal by providing educational guidance that improves career readiness and promotes lifelong learning.

4. Problem Statement

Many students face difficulties in selecting the right career path due to limited access to career counseling. They spend significant time searching multiple websites for interview preparation, resume tips, internships, and learning resources.

There is a need for a centralized and user-friendly platform that provides career-related guidance in one place.

5. Objectives

The main objectives of the project are:

- Develop a simple AI-inspired chatbot.
 - Help students with career planning.
 - Provide resume writing guidance.
 - Support interview preparation.
 - Guide users towards internships.
 - Recommend skill development paths.
 - Promote quality education through digital assistance.
-

6. Proposed Solution

Career Compass AI is a browser-based chatbot developed using HTML, CSS, and JavaScript.

Users can type career-related questions, and the chatbot provides predefined responses based on recognized keywords.

The system offers guidance related to:

- Career Selection
 - Resume Building
 - Interview Preparation
 - Internship Opportunities
 - Skill Development
 - Higher Studies
-

7. Features

- Career Guidance
 - Resume Building Tips
 - Interview Preparation
 - Internship Guidance
 - Skill Development Suggestions
 - Higher Studies Information
-

8. Technology Stack

Technology	Purpose
HTML5	Web Structure
CSS3	User Interface Design
JavaScript	Chatbot Logic
GitHub	Source Code Hosting
GitHub Pages	Project Deployment

9. Working Methodology

1. User enters a career-related question.
2. JavaScript processes the input.
3. Keywords are matched against the chatbot knowledge base.
4. A relevant response is generated.
5. The chatbot displays the answer in the chat window.

10. User Interface

Suggested screenshots:

- Homepage

- Chat Interface

11. Sample Chatbot Interactions

User

How can I improve my resume?

Career Compass AI

Keep your resume concise. Include projects, internships, certifications, achievements, and technical skills.

User

How should I prepare for interviews?

Career Compass AI

Practice HR and technical questions, revise core subjects, and explain your projects confidently.

User

Where can I find internships?

Career Compass AI

You can apply through LinkedIn, Internshala, AICTE Internship Portal, and company career websites.

12. GitHub Repository

Repository Name:

career-compass-ai

Repository Link:

<https://github.com/Jevilx/career-compass-ai>

13. Live Website

GitHub Pages Link:

14. Future Scope

Future improvements include:

- Integration with AI models such as Google Gemini.
 - Resume analysis.
 - Personalized career recommendations.
 - Job recommendation system.
 - User login and profile management.
 - Multi-language support.
-

15. Conclusion

Career Compass AI demonstrates how web technologies can be used to create an accessible career guidance platform. The project contributes to **SDG 4: Quality Education** by helping students make informed academic and professional decisions. It also provides a foundation for future AI-powered educational applications.
